The Course Creator Prompt Pack

A complete course without a studio: curriculum, scripts, worksheets, funnel, and the student questions answered before they are asked. Claude structures it, HeyGen presents it, GoHighLevel sells and delivers it.

1 · The Curriculum Architect

I am building a course: [topic] for [who] at \$[price].
The transformation: from [where they start] to [where they end].
Architect it: 4-6 modules that each complete one stage of the transformation, 3-5 lessons per module (each teaching ONE thing, under 10 minutes), the quick win in lesson one that proves the course works, and the capstone that makes the transformation undeniable.
Flag any lesson that exists to pad length. Cut it.

TIP, Completion rate is your real product. Students finish short lessons with quick wins; they abandon comprehensive.

2 · The Lesson Script

Write the script for lesson [N]: [lesson promise from curriculum].
My firsthand material: [your stories, examples, numbers for this topic].
Format for avatar presentation: hook question first, the ONE idea, my example, the common mistake, the action step, under 1,200 words, sentences under 15 words, breath breaks marked with |.
End with: "your move:" and the exact action before the next lesson.

3 · The Worksheet Generator

From this lesson script: [paste].
Create the companion worksheet: the action step expanded into 3-5 concrete tasks with checkboxes, one fill-in framework from the lesson, and a self-check question ("you are done when...").
One page. Doing, not summarizing: no "key takeaways" section.

4 · The Funnel

Write my course funnel for [course] at \$[price]:

- 1) Sales page: transformation headline, who it is for and NOT for, module breakdown as outcomes, proof [paste], FAQ with the 4 real objections, guarantee.
- 2) 5-email launch sequence: story, method, proof, objections, honest close.
- 3) The checkout page reassurance block (3 lines).

Voice: teacher, not marketer. No fake scarcity, no countdown theatrics.

5 · The Student Success Machine

Anticipate my students: for the course [outline], predict the 10 questions students will ask, module by module, and write my answers (under 100 words each).

Then write the 3 automated check-in emails: after lesson 1 (momentum), mid-course (the dip, normalize it), completion (celebrate + next step [next offer]).

These answers become my FAQ and my support macros on day one.

Launch

Record yourself once, teach forever. The full stack and the funnel architecture: aitooldrop.com/stacks.
